a.
Colocalized pathways (FDR < 0.05)
Uv response dn
Hedgehog signaling
TGF-beta signaling
Androgen response
Heme metabolism
Hypoxia
Estrogen response late
Protein secretion
MTORC1 signaling
Estrogen response early
Apical surface
Epithelial mesenchymal transition
Fibrosis (O)
TNF-alpha signaling via nfkb
Peroxisome
TGF-beta signaling (KEGG+Reactome)
Coagulation
Cell cycle (KEGG)
IL2 STAT5 signaling
Uv response up
Oncogenes (COSMIC)
Glycolysis
Fatty acid metabolism
Extracellular matrix (Reactome)
MYC targets v1
Interferon gamma response
Oxidative phosphorylation
Inflammatory response
Allograft rejection
KRAS signaling up
Notch signaling
PSC (day 0)
CM (day 80)

Fold enrichment of state-specific contacts
b.
Differentially expressed pathways (FDR < 0.05)
Myogenesis
Hypoxia
TNF-alpha signaling via nfkb
Uv response dn
Heme metabolism
Epithelial mesenchymal transition
Oxidative phosphorylation
Extracellular matrix (Reactome)
Adipogenesis
Apoptosis
KRAS signaling dn
Angiogenesis
Estrogen response late
Spermatogenesis
Pancreas beta cells
Dna repair
Allograft rejection
Unfolded protein response
Mitotic spindle
Senescence inhibitors (CellAge)
MTORC1 signaling
Cell cycle (KEGG)
MYC targets v2
G2M checkpoint
MYC targets v1
E2F targets
GSEA FDR
